B.E in Information Technology (2018-2021)- Pune University

Diploma in Computer Engg (2015-2018)- MSBTE

Work History

2021-09 - present

Software Engineer

Zensar Technologies, Pune

Roles and Responsibilities:
Project:Fairmatic Digital

- Worked as a Frontend Developer at a US-based insurance company, specializing in the Vehicle Insurance domain.
- Successfully implemented Socotra configuration to enable the policyholder, quote, exposure, perils, and endorsement features.
- Developed and maintained the packet generation system for issued policies based on state conditions, which included both static and dynamic documents.
- Utilized HTML, CSS, and Liquid templeting language to create dynamic documents, implementing complex business logic and design requirements.
- Developed and implemented custom validation using Angular to enhance data integrity and user experience.
- Made significant contributions to the implementation of Endorsement policies using the Angular framework.

project :InsureArk

- Developed responsive pages for the InsureArk vehicle insurance project using React.js
- Created a visually appealing and user-friendly landing page, sign in/sign up page, quote page, policy details page, and account using Redux and Hooks**.**
- Utilized Redux ,a predictable state container for Javascript applications.used Actions and Reducers to update and retrieve data.
- Used Hooks to add stateful logic to functional components.Hooks allowed me to manage component – level state ,side effects and perform lifecycle actions .
